AUTO SENSE KITCHENHOODS

HANDS-FREE CONVENIENCE AT ITS BEST WITH THE AUTO-SENSE CHIMNEYS.

Auto Sense kitchen hoods turn on automatically when the gas stove is ignited as this product works with the help of thermal sensors fitted inside the hood which sense the burner heat and switches on the kitchen hood. The speed of the kitchen hood can be adjusted with motion sensors or manually by using touch control. The kitchen hood has to be switched off manually using motion sensor or touch control.

WITH NO OPEN FLAMES,
 YOUR KITCHEN IS CLOSED TO RIS

There are no open flames and the hob heats up only when there's a vessel kept on the glass surface. When the pot is placed on the induction zone, this magnetic field transfers heat directly to the cooking pan, and only the pot gets heated. If there's no contact with a pot, the heating stops automatically.
